| Novel Corona Virus-SARS COV-2 (COVID19) * Sample Type: <i>Nasopharyngeal</i> | Not Detected (Negative) | Not Detected | RT PCR |
| Interpretation Notes : Reference Range: Not Detected Methodology: RT PCR This test is a qualitative PCR test. Not detected indicates that SARS-CoV-2 RNA is either not present in the specimen or is present at a concentration below the assays lower limit of detection. This result may be influenced by the stage of the infection and the quality of the specimen collected for testing. Repeat test if deemed necessary after 72 hours. Remarks: Real Time PCR COVID-19 Detection Kit is a real time PCR based in-vitro diagnostic medical device that is designed to detect the infection of Novel Corona Virus -SARS COV-2 (COVID19) through simultaneous examination of the ORF1ab and N-gene using the nucleic acid extracted from oropharyngeal or nasopharyngeal smears. Limit of Detection (Analytical Sensitivity) is LOD 200 copies / mL Kindly note all detected cases are to be immediately notified to the local regulatory health authorities & requires clinical correlation and further evaluation as indicated. Interpretation of results should be correlated with patient history and clinical presentation. Note: Reporting of test should be in-line with DHA rules and regulations for COVID-19 testing. Ref:- NCEMA guidelines for COVID 19 Reporting | | | |
| End of Report | | | |

These tests are accredited under ISO 15189:2012 unless specified by (*)
 Sample processed on the same day of receipt unless specified otherwise.
 Test results pertains only the sample tested and to be correlated with clinical history.
 Reference range related to Age/Gender.

Dr. Mohamed Fawzy Abdalaal
